Anti – Slip Coating

What is an Anti-slip coating?

When your tub is being refinished we install a textured application to the floor of your tub. This texture is nearly invisible to the eye and provides a safeguard to the tub's surface.

What is the advantage of the Anti-slip coating?

The coating is a permanent application that does not need to be removed when cleaning. A suction cup bathmat needs to be removed upon cleaning and when removing the bathmat it will destroy the surface when lifted away. Bathmats have an adhesiveness that shrinks also ripping the finish on the tub.

Who needs the Anti-slip coating?

Since the coating is to provide as a safeguard, as any surface with water on it can be slick, it will benefit many people. Starting with elderly, families with children, or any individual that may consider putting a bathmat in their tub. **The anti-slip coating is strongly suggested for all commercial and or rental properties, and in some cases may be required.**

How much do they cost?

The installation normally costs \$125.00, but currently priced at \$75.00. The coating is applied to the entire floor length of the bathtub, from the drain to the back of the tub no matter the size of the tub.

Can I get one after my tub has been refinished?

Unfortunately no. This coating process happened in the middle of the refinishing process. Once the undercoat or primer is applied to the tub, the anti-slip coating can be applied before the acrylic urethane known as the topcoat. Once the topcoat is applied you cannot apply the anti-slip coating.

How can I get one?

Since it CANNOT be applied after, it is extremely important that you speak with the technician before the reglazing process has begun and advise them that you want the anti-slip coating applied.

This coating is highly recommended by Fox Valley Bathtubs and we believe will provide instant satisfaction upon use.
